Notice Regarding Amazon Web Services

User guides for Control Solutions IoT devices include instructions for various Amazon services that were available at the time. Some of these services have since, unfortunately, been discontinued by Amazon. The following notices have been issued by Amazon Web Services:

After careful consideration, we have made the decision to discontinue AWS IoT Events, effective May 20, 2026. As an existing customer on AWS IoT Events, you will be able to use AWS IoT Events until May 19, 2026. On May 20, 2026, all support for the service will end and you will no longer be able to use AWS IoT Events.

After careful consideration, we have made the decision to discontinue AWS IoT Analytics, effective December 15, 2025.

NOTE: The AWS "discontinue" date means existing commissioned services will stop working on that date. New instances of the services to be discontinued started being blocked at some earlier date than the final discontinuation date.

ALSO NOTE: While Amazon continues to diminish its usefulness for IoT applications, Thingsboard.io continues to enhance its offerings. Furthermore, Thingsboard.io overcomes some of the limitations that Amazon had all along when it comes to usefulness as a real time automation dashboard. Consider Thingsboard.io as an alternative.
